

ounces of the largest prunes by more than 25 points; or

(2) For prunes that average 54 prunes or more per pound, the count per pound of 10 ounces of the smallest prunes does not vary from the count per pound of 10 ounces of the largest prunes by more than 45 points.

§ 52.3187 Definitions and explanations of defects.

Dried prunes damaged or affected by the following are scorable as defects:

(a) *Off-color*. “Off-color” means a skin color different from characteristic black, blue-black, reddish-purple, or other characteristic skin color for the type.

(b) *Poor texture*. “Poor texture” means porous, woody, or fibrous flesh or immature prunes or prunes possessing flesh interspersed with excessive air pockets in which the texture of the flesh is noticeably different from the flesh of mature prunes which have been properly dried, handled, and processed. “Excessive air pockets” means that the prunes are affected by air pockets to the extent that the appearance and eating quality is seriously affected.

(c) *End cracks*. “End cracks” means callous apex-end cracks which, singly or in the aggregate on a prune, are more than $\frac{3}{8}$ inch in length but not more than $\frac{1}{2}$ inch in length.

(d) *Skin or flesh damage*. “Skin or flesh damage” in the case of “Whole Unpitted” style means:

(1) Callous growth cracks (other than callous apex-end cracks) which, singly or in the aggregate on a prune, exceed $\frac{3}{8}$ inch in length; and callous apex-end cracks which, singly or in the aggregate on a prune, exceed $\frac{1}{2}$ inch in length.

(2) Splits or skin breaks not having callous edges when the flesh is mashed out beyond the protecting skin so as to affect materially the normal appearance of the prune;

(3) Any cracks, splits, or skin breaks open to the pit;

(4) Any skin damage from multiple short skin breaks giving a very “rough” appearance to the prune such as may result from over-dipping, rain damage, processing, or other causes which in Type I dried prunes affect ma-

terially the appearance or edibility of the prune, or which in other types or other mixtures affect markedly the appearance or edibility of the prune.

(e) *Fermentation*. “Fermentation” means that the prune is fermented as evidenced by a distinct sour taste or odor or by darkening in color characteristic of fermentation or souring.

(f) *Scars*. “Scars” mean:

(1) Tough or thick scab which, singly or in combination on a prune, exceeds the area of a circle $\frac{3}{8}$ inch in diameter such as may result from thrip injury, mildew, leaf chafing, limb rubs, or other means; or

(2) Scab which is not tough or thick and which, singly or in combination on a prune, exceeds the area of a circle $\frac{3}{4}$ inch in diameter and which is inconsequential but unsightly though practically blending in color with the skin on the portion of the prune not affected.

(g) *Heat damage*. “Heat damage” means burning or scorching from the sun or in dehydration so as to damage materially the skin or flesh, or both, of the prune.

(h) *Insect injury*. “Insect injury” means healed or unhealed surface blemishes and healed or unhealed blemishes extending into the flesh which affect materially the appearance, edibility, or keeping quality of the prune but which do not possess evidence of insect infestation.

(i) *Other means*. “Other means” includes damage by any injury or defect or group of defects not specifically mentioned in this section which materially affects the appearance, edibility, or keeping quality of the fruit, but “other means” does not include defects of a nature such as defined in paragraph (j), (k), (l), (m), or (n) of this section.

(j) *Mold*. “Mold” means a characteristic fungus growth as evidenced by a moldy or smutty condition and which, singly or in the aggregate on a prune, is equal to or exceeds the area of a circle $\frac{3}{16}$ inch in diameter.

(k) *Dirt*. “Dirt” means the presence of any quantity of such substance, whether imbedded or adhering to the prune, which gives the prune a dirty, smudgy appearance and which may not be removed readily by washing.

§ 52.3188

(l) *Foreign material*. “Foreign material” means leaves, twigs, pieces of wood, and similar extraneous materials which are objectionable.

(m) *Insect infestation*. “Insect infestation” means the presence of dead insects, insect fragments, or insect remains. (No live insects are permitted).

(n) *Decay*. “Decay” means a state of decomposition, wholly or in part, of the prune.

Defects and summary of allowances ¹	Grade A maximum	Grade B maximum	Grade C maximum	Substandard maximum
Total of all defects, including off-color	10 percent	15 percent	No limit except as indicated below.
Total of all defects, including off-color and poor texture.	20 percent.	
Poor texture, end cracks, skin or flesh damage, ³ fermentation, scars, heat damage, insect injury, other means, mold, dirt, foreign material, insect infestation, decay.	But no more than 6 percent.	But no more than 8 percent.		
End cracks, ² skin or flesh damage, ³ fermentation, scars, heat damage, insect injury, other means, mold, dirt, foreign material, insect infestation, decay.	10 percent ² .	
Skin or flesh damage, ³ fermentation, scars, heat damage, insect injury, other means, mold, dirt, foreign material, insect infestation, decay.	But no more than 8 percent.	
Mold, dirt, foreign material, insect infestation, decay.	3 percent	4 percent	5 percent	5 percent.
Decay	But no more than 1 percent.	But no more than 1 percent.	But no more than 1 percent.	But no more than 1 percent.

Total

U.S. Grade (including all factors)

¹ Percentages of defects are “by weight.”

² Except that each 1 percent of end cracks to, and including 8 percent, by weight, shall be considered as ½ percent damaged by end cracks; and any additional end cracks shall be calculated as true percentage, by weight.

³ Allowances for “skin or flesh damage” apply only to “Whole Unpitted” style.
